10. Remarks on Usage

10-1. Storage Condition

Parts should be stored in temperature range of -5 to +40°C, humidity 40 to 60% RH, and avoid direct sunlight. Then use within 6 months.

10-2. Handling Condition

Although KC7050Y has protection circuit against static electricity, when excess static electricity is applied, the inside IC may get damaged.

When mounting on PCB, please make sure the direction of KC7050Y is correct, otherwise KC7050Y will increase in temperature and may damaged.

Please do not use KC7050Y under unfavorable condition such as beyond specified range in catalogue or specification sheet.

When using an auto-mounting machine, select the one which give silent impulse as little as possible to the relevant components and operate it with much attentive confirmation so that it may not cause damaged.

After making the KC7050Y mounted on a printed circuit board, if it is required to divide the printed circuit board into another one, use it with attentive confirmation so that a warp caused by this division might not affect any damage. When designing a printed circuit board as well as handling the mounting location, the printed circuit board has to be being stress free area as much as possible.

Please do not use KC7050Y under condition in the water or salt water will drop on KC7050Y and under environment of dew or harmful gas.

10-3. Soldering

Please use KC7050Y under condition " IR or Vapor phase Reflow " only.

10-4. Washing Condition

If KC7050Y is applied ultrasonic, it may be inferior and destroy.

Please don't use ultrasonic cleaner.

In case of using KC7050Y without above precaution, Kyocera is unable to guarantee the specified characteristics.
