Wire-to-Board Swing-Lock Connector for Low-Profile Power Source

DF61 Series

■Features

1.Reinforced Swing Lock Structure

Our unique swing-lock structure cradles the wire side plug and resists the plug from becoming disengaged due to handling strain or loads.

2.Header Lock Improves Plug Retention

During mating, the hea der lock engages with the plug assembly. The lock is reinforced with metal which adds strength to the lock and increases the retention between the header and the plug.

3.Compact Size- High Voltage

The compact 2.2mm pitch connector has a voltage rating of 350V due to the long creep distance.

4. Solder Wicking Prevention

Header is molded in one piece. This ensures a tight fit between the contact and the header and prevents solder wicking.

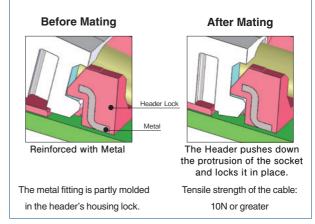

5. High Current of MAX 5 Amps (22AWG)

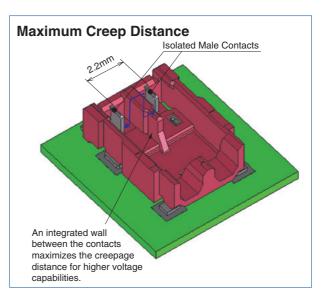

A highly conductive material is used for the contacts. The material provides for a high current flow by reducing the contact resistance.

■Applications

Digital cameras, digital video cameras, LED lights, laptop computers, tablet computers, portable devices, power supply equipment, etc.

Operating Precautions

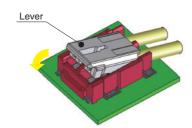

7. Mating/Un-mating **Mating Operation**

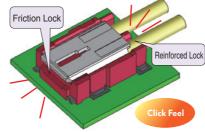

(1) Start by placing the connector against the header lock at an angle. If the plug is not started at an angle, it will cause damage to the connector.

(2) Then, in a slight, rotating movement, push the front section of the plug down.

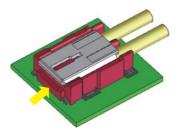

(3) Keep pressing down until a "click" feeling is sensed. The connector is now fully and properly mated.

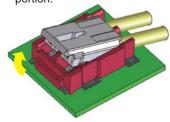

Un-mating Operation

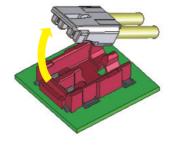

(1) Begin by lifting up on the front section of the plug.

(2) Continue to rotate it upwards and release the friction lock portion.

(3) Once the rear, or reinforced lock, is released the plug will come free from the header and complete the un-mating sequence.
