

1. Overview

1.1 Features

The R8C/3NT Group of single-chip MCUs incorporates the R8C CPU core, employing sophisticated instructions for a high level of efficiency. With 1 Mbyte of address space, and it is capable of executing instructions at high speed. In addition, the CPU core boasts a multiplier for high-speed operation processing.

Power consumption is low, and the supported operating modes allow additional power control. These MCUs are designed to maximize EMI/EMS performance.

Integration of many peripheral functions, including multifunction timer and serial interface, reduces the number of system components.

A sensor control unit is also integrated, enabling detection of the floating capacitance of the electrostatic capacitive touch electrode.

The R8C/3NT Group has data flash (1 KB × 4 blocks) with the background operation (BGO) function.

1.1.1 Applications

Electronic household appliances, office equipment, audio equipment, consumer equipment, etc.

1.1.2 Specifications

Tables 1.1 and 1.2 outline the Specifications for R8C/3NT Group.

Table 1.1 Specifications for R8C/3NT Group (1)

Item	Function	Specification
CPU	Central processing unit	R8C CPU core <ul style="list-style-type: none"> • Number of fundamental instructions: 89 • Minimum instruction execution time: <ul style="list-style-type: none"> 50 ns ($f(XIN) = 20$ MHz, $VCC = 2.7$ to 5.5 V) 200 ns ($f(XIN) = 5$ MHz, $VCC = 1.8$ to 5.5 V) • Multiplier: 16 bits \times 16 bits \rightarrow 32 bits • Multiply-accumulate instruction: 16 bits \times 16 bits + 32 bits \rightarrow 32 bits • Operation mode: Single-chip mode (address space: 1 Mbyte)
Memory	ROM, RAM, Data flash	Refer to Table 1.3 Product List for R8C/3NT Group
Power Supply Voltage Detection	Voltage detection circuit	<ul style="list-style-type: none"> • Power-on reset • Voltage detection 3 (detection level of voltage detection 0 and voltage detection 1 selectable)
I/O Ports	Programmable I/O ports	<ul style="list-style-type: none"> • Input-only: 1 pin • CMOS I/O ports: 43, selectable pull-up resistor • High current drive ports: 43
Clock	Clock generation circuits	<ul style="list-style-type: none"> • 4 circuits: XIN clock oscillation circuit, XCIN clock oscillation circuit (32 kHz), High-speed on-chip oscillator (with frequency adjustment function), Low-speed on-chip oscillator • Oscillation stop detection: XIN clock oscillation stop detection function • Frequency divider circuit: Dividing selectable 1, 2, 4, 8, and 16 • Low power consumption modes: <ul style="list-style-type: none"> Standard operating mode (high-speed clock, low-speed clock, high-speed on-chip oscillator, low-speed on-chip oscillator), wait mode, stop mode
		Real-time clock (timer RE)
Interrupts		<ul style="list-style-type: none"> • Interrupt Vectors: 69 • External: 9 sources ($\overline{INT} \times 5$, key input $\times 4$) • Priority levels: 7 levels
Watchdog Timer		<ul style="list-style-type: none"> • 14 bits \times 1 (with prescaler) • Reset start selectable • Low-speed on-chip oscillator for watchdog timer selectable
DTC (Data Transfer Controller)		<ul style="list-style-type: none"> • 1 channel • Activation sources: 32 • Transfer modes: 2 (normal mode, repeat mode)
Timer	Timer RA	8 bits \times 1 (with 8-bit prescaler) Timer mode (period timer), pulse output mode (output level inverted every period), event counter mode, pulse width measurement mode, pulse period measurement mode
	Timer RB	8 bits \times 1 (with 8-bit prescaler) Timer mode (period timer), programmable waveform generation mode (PWM output), programmable one-shot generation mode, programmable wait one-shot generation mode
	Timer RC	16 bits \times 1 (with 4 capture/compare registers) Timer mode (input capture function, output compare function), PWM mode (output 3 pins), PWM2 mode (PWM output pin)
	Timer RE	8 bits \times 1 Real-time clock mode (count seconds, minutes, hours, days of week), output compare mode

Table 1.2 Specifications for R8C/3NT Group (2)

Item	Function	Specification
Serial Interface	UART0, UART1	Clock synchronous serial I/O/UART x 2 channel
	UART2	Clock synchronous serial I/O, UART
Synchronous Serial Communication Unit (SSU)		4 circuits (shared with I ² C bus)
I ² C bus		4 circuits (shared with SSU)
Sensor Control Unit		System CH x 3, electrostatic capacitive touch detection x 5
A/D Converter		10-bit resolution x 12 channels, includes sample and hold function, with sweep mode
Flash Memory		<ul style="list-style-type: none"> • Programming and erasure voltage: VCC = 2.7 to 5.5 V • Programming and erasure endurance: 10,000 times (data flash) 1,000 times (program ROM) • Program security: ROM code protect, ID code check • Debug functions: On-chip debug, on-board flash rewrite function • Background operation (BGO) function (data flash)
Operating Frequency/Supply Voltage		f(XIN) = 20 MHz (VCC = 2.7 to 5.5 V) f(XIN) = 5 MHz (VCC = 1.8 to 5.5 V)
Current consumption		Typ. 7.0 mA (VCC = 5.0 V, f(XIN) = 20 MHz) Typ. 3.5 mA (VCC = 3.0 V, f(XIN) = 10 MHz) Typ. 4.0 μA (VCC = 3.0 V, wait mode (f(XCIN) = 32 kHz)) Typ. 2.0 μA (VCC = 3.0 V, stop mode)
Operating Ambient Temperature		-20 to 85°C (N version)
Package		48-pin WPP Package code: SWBG0048LA-A

1.2 Product List

Table 1.3 lists Product List for R8C/3NT Group. Figure 1.1 shows a Part Number, Memory Size, and Package of R8C/3NT Group.

Table 1.3 Product List for R8C/3NT Group **Current of Jan 2011**

Part No.	ROM Capacity		RAM Capacity	Package Type	Remarks
	Program ROM	Data flash			
R5F213N7TNBX	48 Kbytes	1 Kbyte × 4	4 Kbytes	SWBG0048LA-A	N version
R5F213N8TNBX	64 Kbytes	1 Kbyte × 4	6 Kbytes	SWBG0048LA-A	
R5F213NATNBX	96 Kbytes	1 Kbyte × 4	8 Kbytes	SWBG0048LA-A	
R5F213NCTNBX	128 Kbytes	1 Kbyte × 4	10 Kbytes	SWBG0048LA-A

	7		P3_1		(TRBO)					

Note:

1. Can be assigned to the pin in parentheses by a program.

1.5 Pin Functions

Tables 1.5 and 1.6 list Pin Functions.

Table 1.5 Pin Functions (1)

Item	Pin Name	I/O Type	Description
Power supply input	VCC, VSS	—	Apply 1.8 to 5.5 V to the VCC pin. Apply 0 V to the VSS pin.
Analog power supply input	AVCC, AVSS	—	Power supply for the A/D converter. Connect a capacitor between AVCC and AVSS.
Reset input	$\overline{\text{RESET}}$	I	Input "L" on this pin resets the MCU.
MODE	MODE	I	Connect this pin to VCC via a resistor.
XIN clock input	XIN	I	These pins are provided for XIN clock generation circuit I/O. Connect a ceramic resonator or a crystal oscillator between the XIN and XOUT pins. ⁽¹⁾ To use an external clock, input it to the XOUT pin and leave the XIN pin open.
XIN clock output	XOUT	I/O	
XCIN clock input	XCIN	I	These pins are provided for XCIN clock generation circuit I/O. Connect a crystal oscillator between the XCIN and XCOU pins. ⁽¹⁾ To use an external clock, input it to the XCIN pin and leave the XCOU pin open.
XCIN clock output	XCOU	O	
$\overline{\text{INT}}$ interrupt input	$\overline{\text{INT0}}$ to $\overline{\text{INT4}}$	I	$\overline{\text{INT}}$ interrupt input pins.
Key input interrupt	$\overline{\text{KI0}}$ to $\overline{\text{KI3}}$	I	Key input interrupt input pins.
Timer RA	TRAIO	I/O	Timer RA I/O pin.
	TRAO	O	Timer RA output pin.
Timer RB	TRBO	O	Timer RB output pin.
Timer RC	TRCCLK	I	External clock input pin.
	TRCTRG	I	External trigger input pin.
	TRCIOA, TRCIOB, TRCIOC, TRCIOD	I/O	Timer RC I/O pins.
Timer RE	TREO	O	Divided clock output pin.
Serial interface	CLK0, CLK1, CLK2	I/O	Transfer clock I/O pins.
	RXD0, RXD1, RXD2	I	Serial data input pins.
	TXD0, TXD1, TXD2	O	Serial data output pins.
	$\overline{\text{CTS2}}$	I	Transmission control input pin.
	$\overline{\text{RTS2}}$	O	Reception control output pin.

I: Input O: Output I/O: Input and output

Note:

1. Refer to the oscillator manufacturer for oscillation characteristics.

Table 1.6 Pin Functions (2)

Item	Pin Name	I/O Type	Description
SSU	SSI_i	I/O	Data I/O pin.
	SCS_i	I/O	Chip-select signal I/O pin.
	SSCK_i	I/O	Clock I/O pin.
	SSO_i	I/O	Data I/O pin.
I ² C bus	SCL_i	I/O	Clock I/O pin
	SDA_i	I/O	Data I/O pin
Reference voltage input	VREF	I	Reference voltage input pin to A/D converter.
A/D converter	AN0 to AN11	I	Analog input pins to A/D converter.
	ADTRG	I	AD external trigger input pin.
Sensor control unit	CHxA, CHxB, CHxC	I/O	Control pins for electrostatic capacitive touch detection
	CH0 to CH4	I	Electrostatic capacitive touch detection pins
I/O port	P0_0 to P0_7, P1_0 to P1_7, P2_0 to P2_7, P3_0 to P3_1, P3_3 to P3_5, P3_7, P4_3 to P4_7, P6_0 to P6_7	I/O	CMOS I/O ports. Each port has an I/O select direction register, allowing each pin in the port to be directed for input or output individually. Any port set to input can be set to use a pull-up resistor or not by a program.
Input port	P4_2	I	Input-only port.

i = 0 to 3

I: Input O: Output I/O: Input and output

2. Central Processing Unit (CPU)

Figure 2.1 shows the CPU Registers. The CPU contains 13 registers. R0, R1, R2, R3, A0, A1, and FB configure a register bank. There are two sets of register bank.

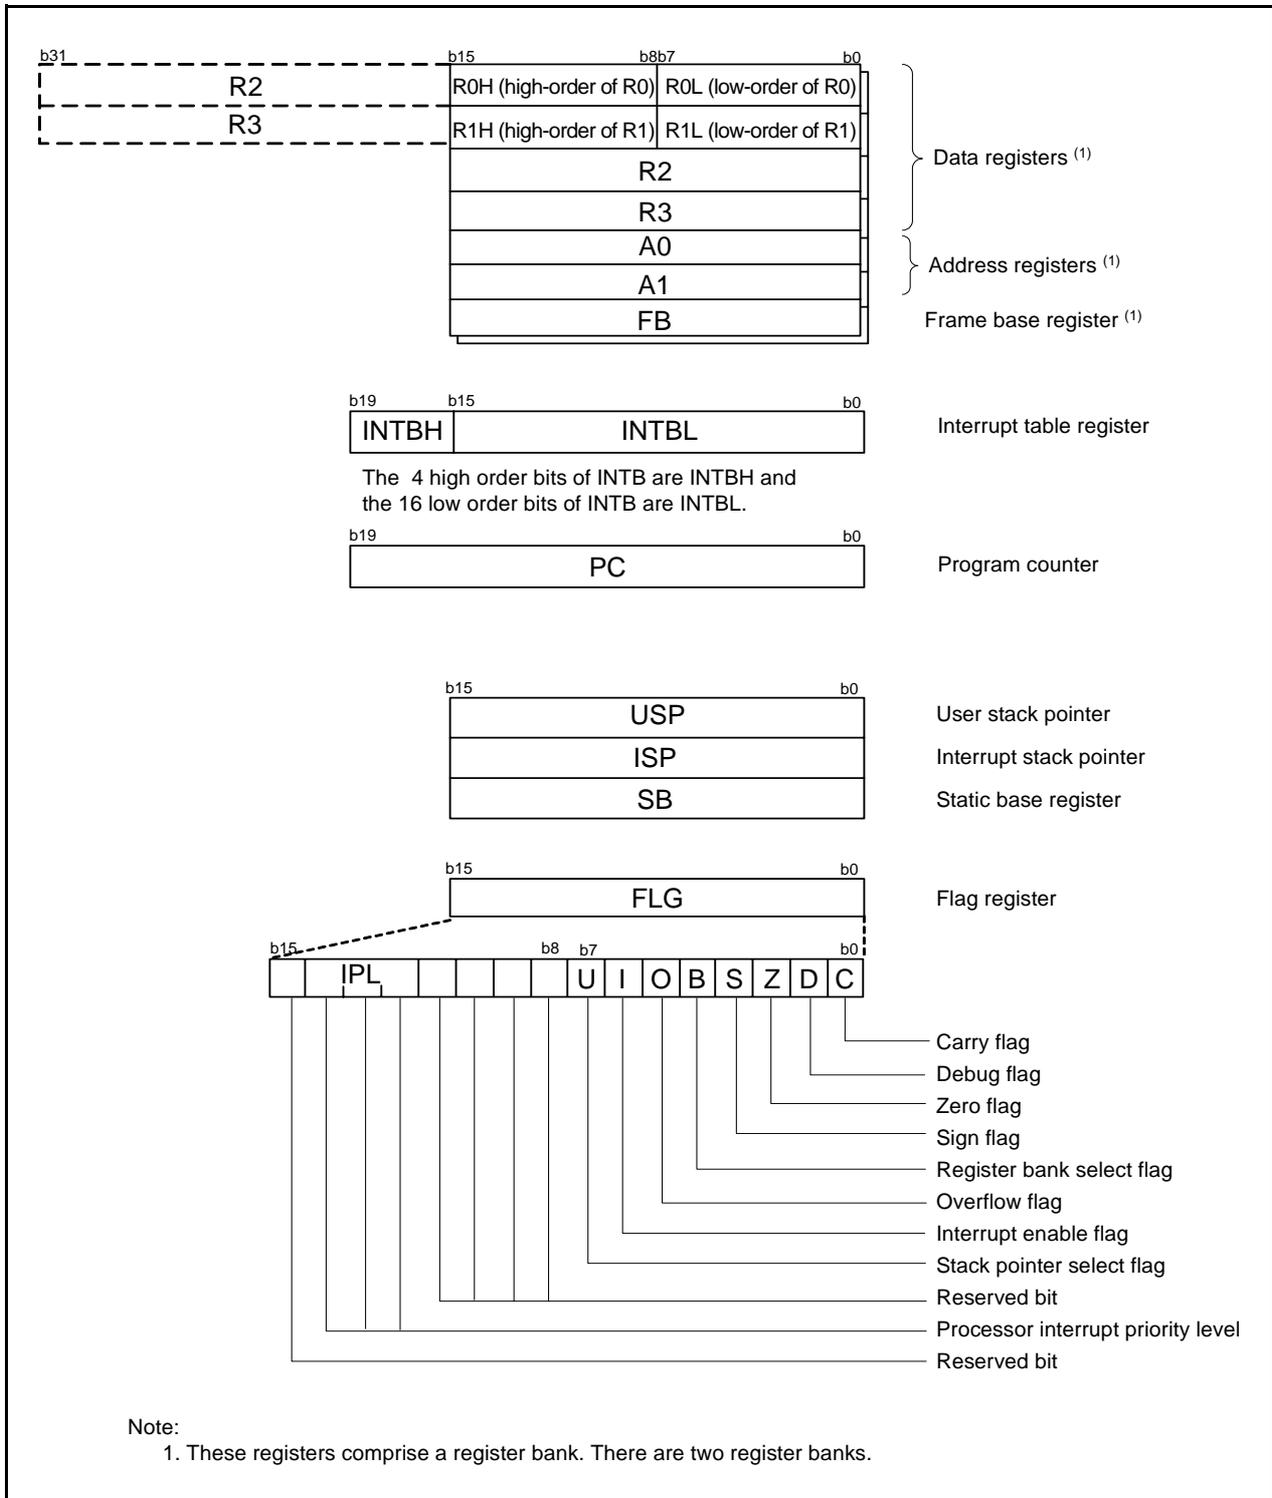

Figure 2.1 CPU Registers

2.1 Data Registers (R0, R1, R2, and R3)

R0 is a 16-bit register for transfer, arithmetic, and logic operations. The same applies to R1 to R3. R0 can be split into high-order bits (R0H) and low-order bits (R0L) to be used separately as 8-bit data registers. R1H and R1L are analogous to R0H and R0L. R2 can be combined with R0 and used as a 32-bit data register (R2R0). R3R1 is analogous to R2R0.

2.2 Address Registers (A0 and A1)

A0 is a 16-bit register for address register indirect addressing and address register relative addressing. It is also used for transfer, arithmetic, and logic operations. A1 is analogous to A0. A1 can be combined with A0 and as a 32-bit address register (A1A0).

2.3 Frame Base Register (FB)

FB is a 16-bit register for FB relative addressing.

2.4 Interrupt Table Register (INTB)

INTB is a 20-bit register that indicates the starting address of an interrupt vector table.

2.5 Program Counter (PC)

PC is 20 bits wide and indicates the address of the next instruction to be executed.

2.6 User Stack Pointer (USP) and Interrupt Stack Pointer (ISP)

The stack pointers (SP), USP and ISP, are each 16 bits wide. The U flag of FLG is used to switch between USP and ISP.

2.7 Static Base Register (SB)

SB is a 16-bit register for SB relative addressing.

2.8 Flag Register (FLG)

FLG is an 11-bit register indicating the CPU state.

2.8.1 Carry Flag (C)

The C flag retains carry, borrow, or shift-out bits that have been generated by the arithmetic and logic unit.

2.8.2 Debug Flag (D)

The D flag is for debugging only. Set it to 0.

2.8.3 Zero Flag (Z)

The Z flag is set to 1 when an arithmetic operation results in 0; otherwise to 0.

2.8.4 Sign Flag (S)

The S flag is set to 1 when an arithmetic operation results in a negative value; otherwise to 0.

2.8.5 Register Bank Select Flag (B)

Register bank 0 is selected when the B flag is 0. Register bank 1 is selected when this flag is set to 1.

2.8.6 Overflow Flag (O)

The O flag is set to 1 when an operation results in an overflow; otherwise to 0.

2.8.7 Interrupt Enable Flag (I)

The I flag enables maskable interrupts.

Interrupts are disabled when the I flag is set to 0, and are enabled when the I flag is set to 1. The I flag is set to 0 when an interrupt request is acknowledged.

2.8.8 Stack Pointer Select Flag (U)

ISP is selected when the U flag is set to 0; USP is selected when the U flag is set to 1.

The U flag is set to 0 when a hardware interrupt request is acknowledged or the INT instruction of software interrupt numbers 0 to 31 is executed.

2.8.9 Processor Interrupt Priority Level (IPL)

IPL is 3 bits wide and assigns processor interrupt priority levels from level 0 to level 7.

If a requested interrupt has higher priority than IPL, the interrupt is enabled.

2.8.10 Reserved Bit

If necessary, set to 0. When read, the content is undefined.

3. Memory

3.1 R8C/3NT Group

Figure 3.1 is a Memory Map of R8C/3NT Group. The R8C/3NT Group has a 1-Mbyte address space from addresses 00000h to FFFFFFFh. The internal ROM (program ROM) is allocated lower addresses, beginning with address 0FFFFh. For example, a 64-Kbyte internal ROM area is allocated addresses 04000h to 13FFFh. The fixed interrupt vector table is allocated addresses 0FFDCh to 0FFFFh. The starting address of each interrupt routine is stored here.

The internal ROM (data flash) is allocated addresses 03000h to 03FFFh.

The internal RAM is allocated higher addresses, beginning with address 00400h. For example, a 6-Kbyte internal RAM area is allocated addresses 00400h to 01BFFh. The internal RAM is used not only for data storage but also as a stack area when a subroutine is called or when an interrupt request is acknowledged.

Special function registers (SFRs) are allocated addresses 00000h to 002FFh and 02C00h to 02FFFh (the SFR areas for the DTC and other modules). Peripheral function control registers are allocated here. All unallocated spaces within the SFRs are reserved and cannot be accessed by users.

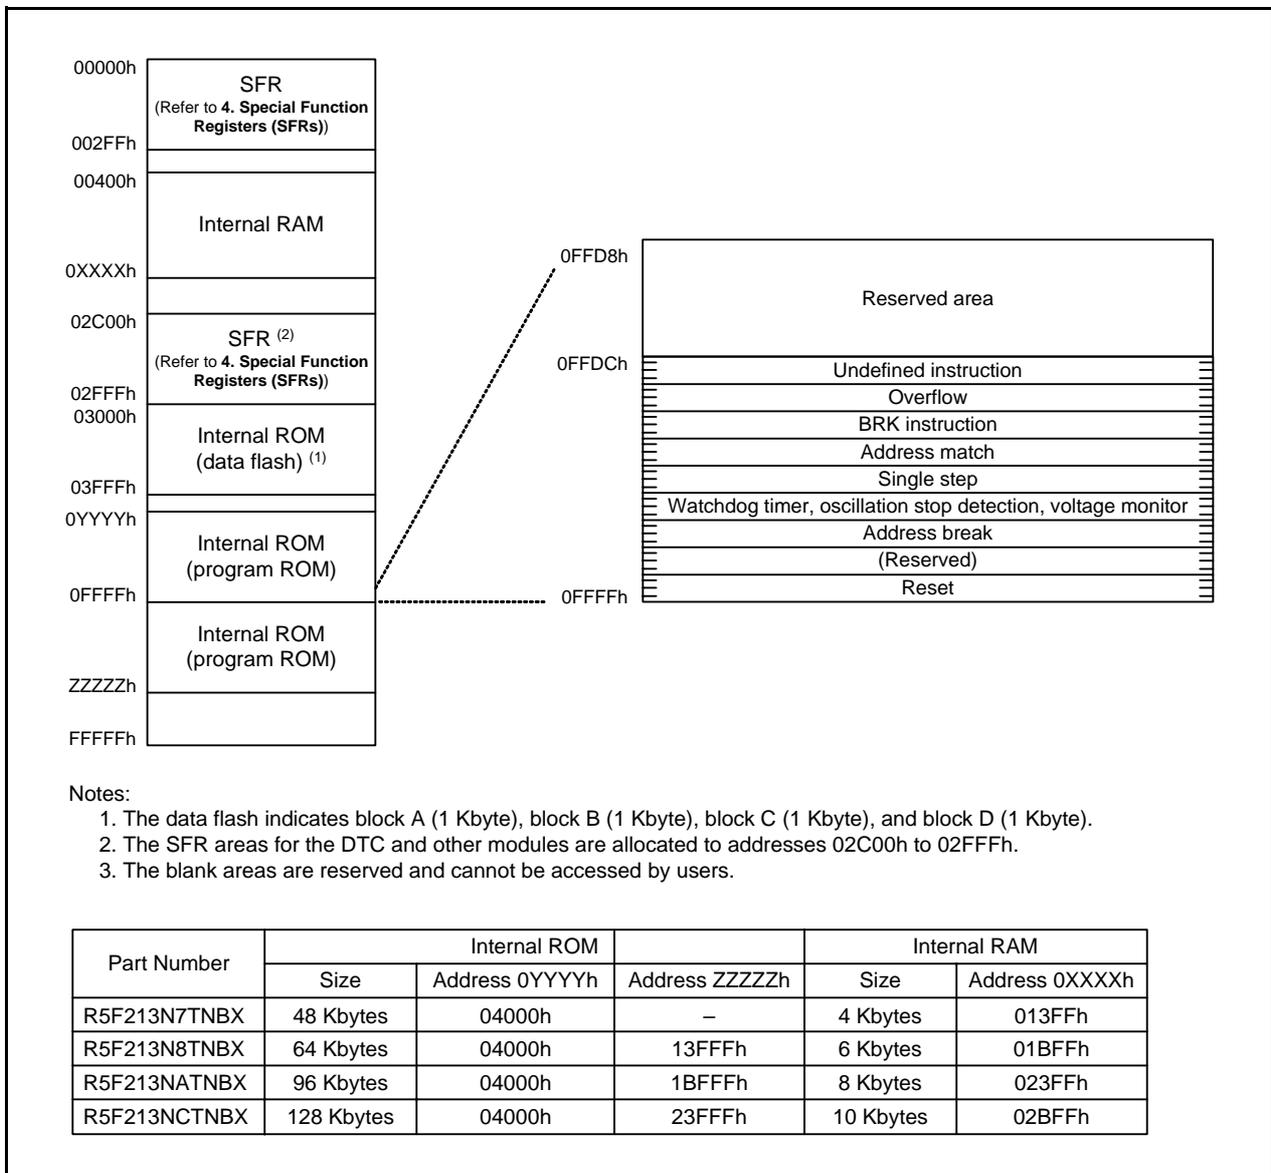

Figure 3.1 Memory Map of R8C/3NT Group

4. Special Function Registers (SFRs)

An SFR (special function register) is a control register for a peripheral function. Tables 4.1 to 4.14 list the special function registers. Table 4.15 lists the ID Code Areas and Option Function Select Area.

Table 4.1 SFR Information (1) (1)

Address	Register	Symbol	After Reset

Table 4.15 ID Code Areas and Option Function Select Area

Address	Area Name	Symbol	After Reset
FFDBh	Option Function Select Register 2	OFS2	(Note 1)
FFDFh	ID1		(Note 2)
FFE3h	ID2		(Note 2)
FFEBh	ID3		(Note 2)
FFEFh	ID4		(Note 2)
FFF3h	ID5		(Note 2)
FFF7h	ID6		(Note 2)
FFFBh	ID7		(Note 2)
FFFh	Option Function Select Register	OFS	(Note 1)

Notes:

- The option function select area is allocated in the flash memory, not in the SFRs. Set appropriate values as ROM data by a program.
Do not write additions to the option function select area. If the block including the option function select area is erased, the option function select area is set to FFh.
When blank products are shipped, the option function select area is set to FFh. It is set to the written value after written by the user.
When factory-programming products are shipped, the value of the option function select area is the value programmed by the user.
- The ID code areas are allocated in the flash memory, not in the SFRs. Set appropriate values as ROM data by a program.
Do not write additions to the ID code areas. If the block including the ID code areas is erased, the ID code areas are set to FFh.
When blank products are shipped, the ID code areas are set to FFh. They are set to the written value after written by the user.
When factory-programming products are shipped, the value of the ID code areas is the value programmed by the user.

			$2.7\text{ V} \leq V_{ref} = AV_{CC} \leq 5.5\text{ V}^{(2)}$	2	—	10	MHz
			$2.2\text{ V} \leq V_{ref} = AV_{CC} \leq 5.5\text{ V}^{(2)}$	2	—	5	MHz
—	Tolerance level impedance				3	$k\Omega$	
tCONV	Conversion time	10-bit mode	$V_{ref} = AV_{CC} = 5.0\text{ V}$, $\phi_{AD} = 20\text{ MHz}$	2.2	—	—	μs
		8-bit mode	$V_{ref} = AV_{CC} = 5.0\text{ V}$, $\phi_{AD} = 20\text{ MHz}$	2.2	—	—	μs
tsAMP	Sampling time		$\phi_{AD} = 20\text{ MHz}$	0.8	—	—	μs
I _{Vref}	V _{ref} current		$V_{CC} = 5.0\text{ V}$, $XIN = f1 = \phi_{AD} = 20\text{ MHz}$	—	45	—	μA
V _{ref}	Reference voltage			2.2	—	AV_{CC}	V
V _{IA}	Analog input voltage ⁽³⁾			0	—	V_{ref}	V
OCVREF	On-chip reference voltage		$2\text{ MHz} \leq \phi_{AD} \leq 4\text{ MHz}$	1.19	1.34	1.49	V

Notes:

- $V_{CC}/AV_{CC} = V_{ref} = 2.2\text{ to }5.5\text{ V}$, $V_{SS} = 0\text{ V}$, and $T_{opr} = -20\text{ to }85\text{ }^\circ\text{C}$ (N version), unless otherwise specified.
- The A/D conversion result will be undefined in wait mode, stop mode, when the flash memory stops, and in low-current-consumption mode. Do not perform A/D conversion in these states or transition to these states during A/D conversion.
- When the analog input voltage is over the reference voltage, the A/D conversion result will be 3FFh in 10-bit mode and FFh in 8-bit mode.

Table 5.4 Flash Memory (Program ROM) Electrical Characteristics

Symbol	Parameter	Conditions	Standard			Unit
			Min.	Typ.	Max.	
—	Program/erase endurance ⁽²⁾		1,000 ⁽³⁾	—	—	times
—	Byte program time		—	80	TBD	μs
—	Block erase time		—	0.3	TBD	s
t _d (SR-SUS)	Time delay from suspend request until suspend		—	—	5 + CPU clock × 3 cycles	ms
—	Interval from erase start/restart until following suspend request		0	—	—	μs
—	Time from suspend until erase restart		—	—	30 + CPU clock × 1 cycle	μs
t _d (CMDRST-READY)	Time from when command is forcibly stopped until reading is enabled		—	—	30 + CPU clock × 1 cycle	μs
—	Program, erase voltage		2.7	—	5.5	V
—	Read voltage		1.8	—	5.5	V
—	Program, erase temperature		0	—	60	°C
—	Data hold time ⁽⁷⁾	Ambient temperature = 55 °C	20	—	—	year

Notes:

- V_{CC} = 2.7 to 5.5 V and T_{opr} = 0 to 60 °C, unless otherwise specified.
- Definition of programming/erasure endurance
The programming and erasure endurance is defined on a per-block basis.
If the programming and erasure endurance is n (n = 1,000), each block can be erased n times. For example, if 1,024 1-byte writes are performed to different addresses in block A, a 1 Kbyte block, and then the block is erased, the programming/erasure endurance still stands at one. However, the same address must not be programmed more than once per erase operation (overwriting prohibited).
- Endurance to guarantee all electrical characteristics after program and erase. (1 to Min. value can be guaranteed.)
- In a system that executes multiple programming operations, the actual erasure count can be reduced by writing to sequential addresses in turn so that as much of the block as possible is used up before performing an erase operation. For example, when programming groups of 16 bytes, the effective number of rewrites can be minimized by programming up to 128 groups before erasing them all in one operation. It is also advisable to retain data on the erasure endurance of each block and limit the number of erase operations to a certain number.
- If an error occurs during block erase, attempt to execute the clear status register command, then execute the block erase command at least three times until the erase error does not occur.
- Customers desiring program/erase failure rate information should contact their Renesas technical support representative.
- The data hold time includes time that the power supply is off or the clock is not supplied.

Table 5.5 Flash Memory (Data flash Block A to Block D) Electrical Characteristics

Symbol	Parameter	Conditions	Standard			Unit
			Min.	Typ.	Max.	
—	Program/erase endurance ⁽²⁾		10,000 ⁽³⁾	—	—	times
—	Byte program time (program/erase endurance ≤ 1,000 times)		—	160	TBD	μs
—	Byte program time (program/erase endurance > 1,000 times)		—	300	TBD	μs
—	Block erase time (program/erase endurance ≤ 1,000 times)		—	0.2	1	s
—	Block erase time (program/erase endurance > 1,000 times)		—	0.3	1	s
t _d (SR-SUS)	Time delay from suspend request until suspend		—	—	5 + CPU clock × 3 cycles	ms
—	Interval from erase start/restart until following suspend request		0	—	—	μs
—	Time from suspend until erase restart		—	—	30 + CPU clock × 1 cycle	μs
t _d (CMDRST-READY)	Time from when command is forcibly stopped until reading is enabled		—	—	30 + CPU clock × 1 cycle	μs
—	Program, erase voltage		2.7	—	5.5	V
—	Read voltage		1.8	—	5.5	V
—	Program, erase temperature		-20	—	85	°C
—	Data hold time ⁽⁷⁾	Ambient temperature = 55 °C	20	—	—	year

Notes:

- V_{CC} = 2.7 to 5.5 V and T_{opr} = -20 to 85 °C (N version), unless otherwise specified.
- Definition of programming/erasure endurance
The programming and erasure endurance is defined on a per-block basis.
If the programming and erasure endurance is n (n = 10,000), each block can be erased n times. For example, if 1,024 1-byte writes are performed to different addresses in block A, a 1 Kbyte block, and then the block is erased, the programming/erasure endurance still stands at one. However, the same address must not be programmed more than once per erase operation (overwriting prohibited).
- Endurance to guarantee all electrical characteristics after program and erase. (1 to Min. value can be guaranteed.)
- In a system that executes multiple programming operations, the actual erasure count can be reduced by writing to sequential addresses in turn so that as much of the block as possible is used up before performing an erase operation. For example, when programming groups of 16 bytes, the effective number of rewrites can be minimized by programming up to 128 groups before erasing them all in one operation. In addition, averaging the erasure endurance between blocks A to D can further reduce the actual erasure endurance. It is also advisable to retain data on the erasure endurance of each block and limit the number of erase operations to a certain number.
- If an error occurs during block erase, attempt to execute the clear status register command, then execute the block erase command at least three times until the erase error does not occur.
- Customers desiring program/erase failure rate information should contact their Renesas technical support representative.
- The data hold time includes time that the power supply is off or the clock is not supplied.

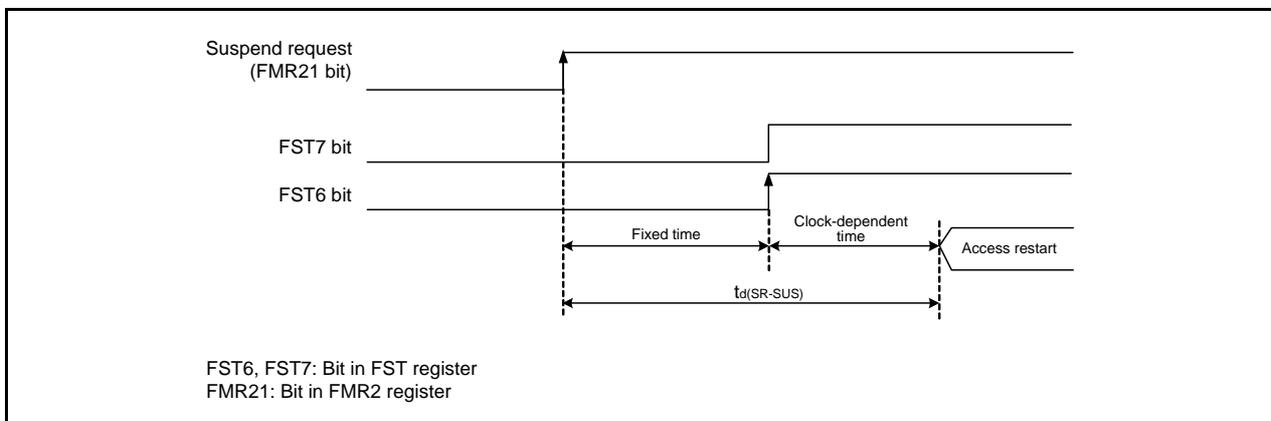

**Figure 5.2 Time delay until Suspend**

Table 5.6 Voltage Detection 0 Circuit Electrical Characteristics

Symbol	Parameter	Condition	Standard			Unit
			Min.	Typ.	Max.	
Vdet0	Voltage detection level Vdet0_0 (2)		TBD	1.90	TBD	V
	Voltage detection level Vdet0_1 (2)		TBD	2.35	TBD	V
	Voltage detection level Vdet0_2 (2)		TBD	2.85	TBD	V
	Voltage detection level Vdet0_3 (2)		TBD	3.80	TBD	V
—	Voltage detection 0 circuit response time (4)	At the falling of Vcc from 5.0 V to (Vdet0_0 – 0.1) V	—	6	TBD	μs
—	Voltage detection circuit self power consumption	VCA25 = 1, Vcc = 5.0 V	—	1.5	—	μA
td(E-A)	Waiting time until voltage detection circuit operation starts (3)		—	—	TBD	μs

Notes:

1. The measurement condition is Vcc = 1.8 to 5.5 V and Topr = –20 to 85 °C (N version).
2. Select the voltage detection level with bits VDSEL0 and VDSEL1 in the OFS register.
3. Necessary time until the voltage detection circuit operates when setting to 1 again after setting the VCA25 bit in the VCA2 register to 0.
4. Time until the voltage monitor 0 reset is generated after the voltage passes Vdet0.

Table 5.7 Voltage Detection 1 Circuit Electrical Characteristics

Symbol	Parameter	Condition	Standard			Unit
			Min.	Typ.	Max.	
Vdet1	Voltage detection level Vdet1_0 (2)	At the falling of Vcc	TBD	2.20	TBD	V
	Voltage detection level Vdet1_1 (2)	At the falling of Vcc	TBD	2.35	TBD	V
	Voltage detection level Vdet1_2 (2)	At the falling of Vcc	TBD	2.50	TBD	V
	Voltage detection level Vdet1_3 (2)	At the falling of Vcc	TBD	2.65	TBD	V
	Voltage detection level Vdet1_4 (2)	At the falling of Vcc	TBD	2.80	TBD	V
	Voltage detection level Vdet1_5 (2)	At the falling of Vcc	TBD	2.95	TBD	V
	Voltage detection level Vdet1_6 (2)	At the falling of Vcc	TBD	3.10	TBD	V
	Voltage detection level Vdet1_7 (2)	At the falling of Vcc	TBD	3.25	TBD	V
	Voltage detection level Vdet1_8 (2)	At the falling of Vcc	TBD	3.40	TBD	V
	Voltage detection level Vdet1_9 (2)	At the falling of Vcc	TBD	3.55	TBD	V
	Voltage detection level Vdet1_A (2)	At the falling of Vcc	TBD	3.70	TBD	V
	Voltage detection level Vdet1_B (2)	At the falling of Vcc	TBD	3.85	TBD	V
	Voltage detection level Vdet1_C (2)	At the falling of Vcc	TBD	4.00	TBD	V
	Voltage detection level Vdet1_D (2)	At the falling of Vcc	TBD	4.15	TBD	V
	Voltage detection level Vdet1_E (2)	At the falling of Vcc	TBD	4.30	TBD	V
	Voltage detection level Vdet1_F (2)	At the falling of Vcc	TBD	4.45	TBD	V
—	Hysteresis width at the rising of Vcc in voltage detection 1 circuit	Vdet1_0 to Vdet1_5 selected	—	0.07	—	V
		Vdet1_6 to Vdet1_F selected	—	0.10	—	V
—	Voltage detection 1 circuit response time (3)	At the falling of Vcc from 5.0 V to (Vdet1_0 – 0.1) V	—	60	TBD	μs
—	Voltage detection circuit self power consumption	VCA26 = 1, Vcc = 5.0 V	—	1.7	—	μA
td(E-A)	Waiting time until voltage detection circuit operation starts (4)		—	—	TBD	μs

Notes:

1. The measurement condition is Vcc = 1.8 to 5.5 V and Topr = –20 to 85 °C (N version).
2. Select the voltage detection level with bits VD1S0 to VD1S3 in the VD1LS register.
3. Time until the voltage monitor 1 interrupt request is generated after the voltage passes Vdet1.
4. Necessary time until the voltage detection circuit operates when setting to 1 again after setting the VCA26 bit in the VCA2 register to 0.

Table 5.8 Voltage Detection 2 Circuit Electrical Characteristics

Symbol	Parameter	Condition	Standard			Unit
			Min.	Typ.	Max.	
Vdet2	Voltage detection level Vdet2_0	At the falling of Vcc	TBD	4.00	TBD	V
—	Hysteresis width at the rising of Vcc in voltage detection 2 circuit		—	0.10	—	V
—	Voltage detection 2 circuit response time (2)	At the falling of Vcc from 5.0 V to (Vdet2_0 – 0.1) V	—	20	150	μs
—	Voltage detection circuit self power consumption	VCA27 = 1, Vcc = 5.0 V	—	1.7	—	μA
t _{d(E-A)}	Waiting time until voltage detection circuit operation starts (3)		—	—	100	μs

Notes:

1. The measurement condition is V_{CC} = 1.8 to 5.5 V and T_{opr} = –20 to 85 °C (N version).
2. Time until the voltage monitor 2 interrupt request is generated after the voltage passes V_{det2}.
3. Necessary time until the voltage detection circuit operates after setting to 1 again after setting the VCA27 bit in the VCA2 register to 0.

Table 5.9 Power-on Reset Circuit (2)

Symbol	Parameter	Condition	Standard			Unit
			Min.	Typ.	Max.	
trth	External power Vcc rise gradient	(1)	0	—	50,000	mV/msec

Notes:

1. The measurement condition is T_{opr} = –20 to 85 °C (N version), unless otherwise specified.
2. To use the power-on reset function, enable voltage monitor 0 reset by setting the LVDAS bit in the OFS register to 0.

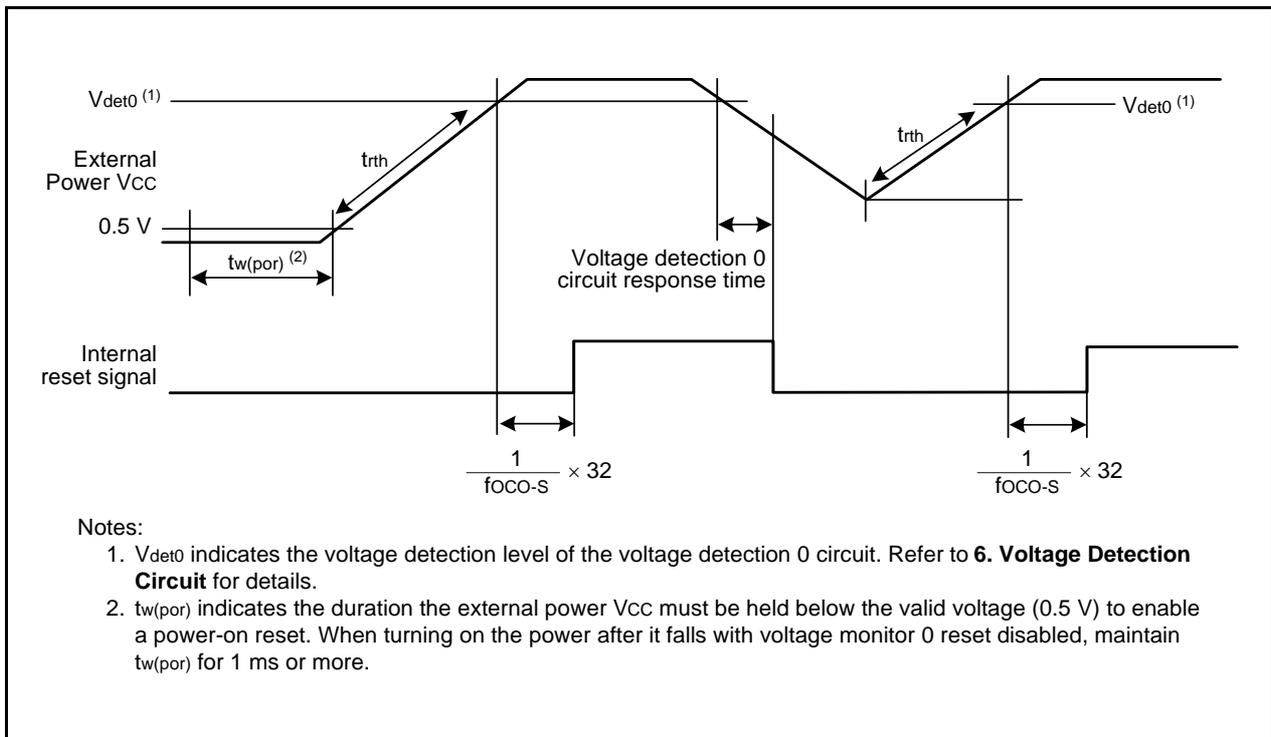

**Figure 5.3 Power-on Reset Circuit Electrical Characteristics**

Table 5.10 High-speed On-Chip Oscillator Circuit Electrical Characteristics

Symbol	Parameter	Condition	Standard			Unit
			Min.	Typ.	Max.	
—	High-speed on-chip oscillator frequency after reset	$V_{CC} = 5.0 \text{ V}$, $T_{opr} = 25 \text{ }^\circ\text{C}$	—	40	—	MHz
—	High-speed on-chip oscillator frequency when the FRA4 register correction value is written into the FRA1 register and the FRA5 register correction value into the FRA3 register ⁽²⁾	$V_{CC} = 5.0 \text{ V}$, $T_{opr} = 25 \text{ }^\circ\text{C}$	—	36.864	—	MHz
—	High-speed on-chip oscillator frequency when the FRA6 register correction value is written into the FRA1 register and the FRA7 register correction value into the FRA3 register	$V_{CC} = 5.0 \text{ V}$, $T_{opr} = 25 \text{ }^\circ\text{C}$	—	32	—	MHz
—	Oscillation stability time	$V_{CC} = 5.0 \text{ V}$, $T_{opr} = 25 \text{ }^\circ\text{C}$	—	TBD	—	ms
—	Self power consumption at oscillation	$V_{CC} = 5.0 \text{ V}$, $T_{opr} = 25 \text{ }^\circ\text{C}$	—	400	—	μA

Notes:

1. $V_{CC} = 5.0 \text{ V}$ and $T_{opr} = 25 \text{ }^\circ\text{C}$, unless otherwise specified.
2. This enables the setting errors of bit rates such as 9600 bps and 38400 bps to be 0% when the serial interface is used in UART mode.

Table 5.11 Low-speed On-Chip Oscillator Circuit Electrical Characteristics

Symbol	Parameter	Condition	Standard			Unit
			Min.	Typ.	Max.	
fOCO-S	Low-speed on-chip oscillator frequency		60	125	250	kHz
—	Oscillation stability time	$V_{CC} = 5.0 \text{ V}$, $T_{opr} = 25 \text{ }^\circ\text{C}$	—	30	TBD	μs
—	Self power consumption at oscillation	$V_{CC} = 5.0 \text{ V}$, $T_{opr} = 25 \text{ }^\circ\text{C}$	—	2	—	μA

Note:

1. $V_{CC} = 1.8$ to 5.5 V and $T_{opr} = -20$ to $85 \text{ }^\circ\text{C}$ (N version), unless otherwise specified.

Table 5.12 Power Supply Circuit Timing Characteristics

Symbol	Parameter	Condition	Standard			Unit
			Min.	Typ.	Max.	
$t_{d(P-R)}$	Time for internal power supply stabilization during power-on ⁽²⁾		—	—	2,000	μs

Notes:

1. The measurement condition is $V_{CC} = 1.8$ to 5.5 V and $T_{opr} = 25 \text{ }^\circ\text{C}$.
2. Waiting time until the internal power supply generation circuit stabilizes during power-on.

Table 5.13 Timing Requirements of Synchronous Serial Communication Unit (SSU)

Symbol	Parameter		Conditions	Standard			Unit
				Min.	Typ.	Max.	
tSUCYC	SSCK _i clock cycle time			4	—	—	tCYC ⁽²⁾

General Precautions in the Handling of MPU/MCU Products

The following usage notes are applicable to all MPU/MCU products from Renesas. For detailed usage notes on the products covered by this manual, refer to the relevant sections of the manual. If the descriptions under General Precautions in the Handling of MPU/MCU Products and in the body of the manual differ from each other, the description in the body of the manual takes precedence.

1. Handling of Unused Pins

Handle unused pins in accord with the directions given under Handling of Unused Pins in the manual.

- The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible. Unused pins should be handled as described under Handling of Unused Pins in the manual.

2. Processing at Power-on

The state of the product is undefined at the moment when power is supplied.

- The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the moment when power is supplied.

In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the moment when power is supplied until the reset process is completed.

In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the moment when power is supplied until the power reaches the level at which resetting has been specified.

3. Prohibition of Access to Reserved Addresses

Access to reserved addresses is prohibited.

- The reserved addresses are provided for the possible future expansion of functions. Do not access these addresses; the correct operation of LSI is not guaranteed if they are accessed.

4. Clock Signals

After applying a reset, only release the reset line after the operating clock signal has become stable. When switching the clock signal during program execution, wait until the target clock signal has stabilized.

- When the clock signal is generated with an external resonator (or from an external oscillator) during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Moreover, when switching to a clock signal produced with an external resonator (or by an external oscillator) while program execution is in progress, wait until the target clock signal is stable.

5. Differences between Products

Before changing from one product to another, i.e. to one with a different part number, confirm that the change will not lead to problems.

- The characteristics of MPU/MCU in the same group but having different part numbers may differ because of the differences in internal memory capacity and layout pattern. When changing to products of different part numbers, implement a system-evaluation test for each of the products.

Notice

- All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
 - Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
 - You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
 - Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
 - When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
 - Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
 - Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
"Specific": Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
 - You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
 - Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
 - Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
 - This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
 - Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.
(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
